

About Non-Surgical Anti-ageing Wrinkle Reduction and Skin Tightening

Bipolar and Tripolar RF technology offer new scientific development in body sculpting, anti-ageing and skin tightening treatments.

High radio frequency waves permeate epidermis and take effect on the collagen-rich dermal tissue directly which makes water molecules in the skin move to and fro.

The move produces controllable heat and results in contraction of collagen, generation of new collagen and dermal remodelling.

The treatment is very effective in improving the texture and overall appearance of your skin.

Conditions that can be treated include:

- **Static wrinkles:** These wrinkles are visible at all times and do not change in appearance with facial movements.
- **Dynamic wrinkles:** These are expression lines that may appear as folds when the skin is not moving, and deepen with facial movements or expressions.
- **Loss of skin tone:** Weakening of the supportive skin structure (collagen and elastin fibers) that result in a loss of skin firmness, or the development of cellulite.

WRINKLE REDUCTION

4 Treatments**

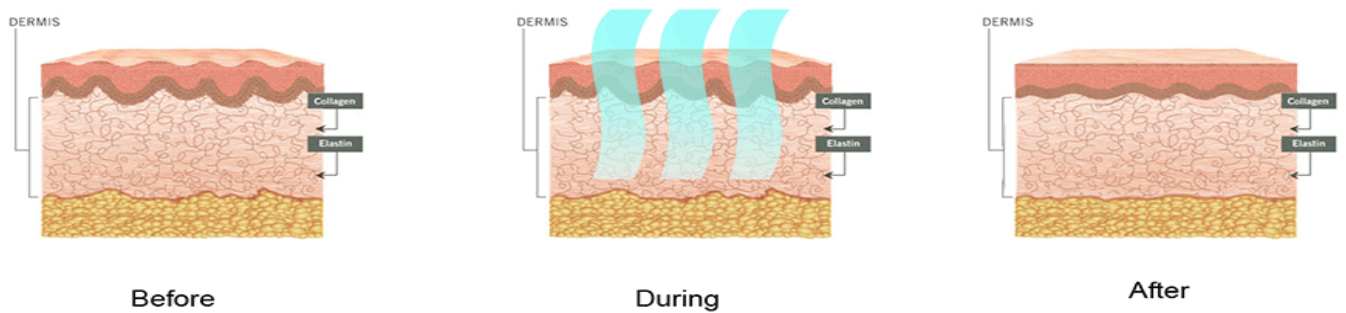

How it works

RADIO FREQUENCY:

Heat generated by RF waves shrinks the bundle of collagen under the skin. The collagen becomes shorter and the skin tightens. The body response is that the collagen will be gradually healed, renewed and even more collagen will be produced. The skin tightens and the overall look is improved.

RF

Radio Frequency regenerates collagen, tightening dermal tissue and skin creating a smooth and glowing complexion.

Treatable Areas

- Forehead
- Eyes
- Lip
- Chin
- Jaw
- Neck
- Chest
- Stomach
- Arms

Health warning

People with serious diseases are asked to please take caution and discuss the effect that the treatment might have on their health with their physician.

People are considered non-candidates if they have cancer, are epileptic, have recently been through surgery, have Hepatitis C, have kidney disease of any kind, are menstruating, pregnant or nursing.

Other health risks include hormone treatment, heart disease, high blood pressure, diabetes, skin diseases and bleeding disorders.

Any persons with medical / electronic / metal / plastic / silicone implants and or instruments are at risk when treated with radio frequency.

PLEASE ENSURE THAT TREATED AREAS ARE **NOT** EXPOSED TO: SUNLIGHT, HEAT, CHEMICALS and/or ALCOHOL

FAQ's

Q: How often can I have treatments?

A: It is recommended that treatments take place every 14 days. Multiple areas can be treated simultaneously.

Q: Is it safe?

A: The radio frequency face lift was approved by the FDA as a non-surgical treatment for wrinkles and facial skin imperfections.

Q: How is this treatment done?

A: A layer of gel is applied to the treatment area. Heat generated by RF waves then shrinks the bundle of collagen under the skin

Q: What results can I expect?

A: Causes immediate collagen contraction

- Reduces wrinkles and fine lines, and softens deeper frown lines
- Noticeably improves skin tone and texture
- Stimulates new collagen formation and plumps the skin

Q: Will the effect be long-lasting?

A: Energy absorbed by the targeted area stimulates your skin to activate collagen production. Together collagen and elastin reinforce the skin's firmness and contours. These protein fibers continue to strengthen after your treatment and you will see improved results over the months ahead.

What other non-surgical workstations do we offer:

- Ultrasonic Cavitation Fat and Cellulite reduction
 Bipolar and Tripolar RF Anti-ageing, Wrinkle reduction and Skin tightening
- IPL – Intense Pulsed Light Visible reduction of Acne, Spider Veins and Pigmentation,
 Skin rejuvenation and Hair removal (including dark skin)
 Bipolar and Tripolar RF Anti-ageing, Wrinkle reduction and Skin tightening
- Teeth Whitening Accelerator Three light sources: Blue, Red or Blue/Red
